## Evaluating the left upper quadrant (LUQ)

### Left upper quadrant (LUQ) view

There are two parts of the LUQ view you want to visualize for free fluid.

Using the phased-array probe in the coronal cross-section, with the indicator towards the patient's head, place the probe in the lower rib spaces and slide down to view both parts of the LUQ view.

A positive LUQ view will be seen first at the spleen-diaphragm view, and then in the spleen-renal view.
