

Level 1

QUIZ SECTION

Now it is your turn. If in doubt, start looking for the QRS complex (focus on sharp deflections!). Also keep in mind that every QRS complex is followed by the T wave after 200 – 400 ms (equivalent to 5 – 10 mm on this ECG paper). In the next step you should already be able to identify the P wave, as the steepness of its deflection is in between that of the QRS and the T waves.
